Finding Shari’i midnight

A calculated point in the night, not always 12:00 a.m.

Midnight follows the night

A published answer from the Office of Ayatollah al-Sistani defines midnight as halfway between sunset and true dawn. Its example uses 7 p.m. sunset and 4 a.m. true dawn, giving 11:30 p.m.

How Namaz calculates it

Namaz takes the midpoint between its computed Maghrib and the following day’s Fajr. This is the app’s calculation definition, using the selected Qom or Tehran settings.

Ask which guidance applies

Definitions and rulings can differ. The app’s row is a calculation aid, not a universal religious ruling. Consult your marja’ or local scholar for your situation.
